Description	CCR8 is a chemokine receptor, belonging to the chemokine receptor family. Research on the structure and function of CCR8 is of significant importance for understanding its role in immune responses and inflammatory processes. Studies on CCR8 antibodies can help reveal the mechanisms by which CCR8 regulates immune cell migration, inflammatory responses, and immune modulation, providing a theoretical basis for the treatment of related diseases. In recent years, CCR8 has garnered attention as a potential therapeutic target in the research of immune-related diseases, making research on CCR8 antibodies clinically significant.
Formulation	phosphate-buffered solution, pH 7.4.
